What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit Δf is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation Δf is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

Do battery energy storage systems need new frequency regulation methods?

Therefore, it is necessary to introduce new frequency regulation methods to enhance frequency support for the power system. Battery Energy Storage Systems (BESS) have become a hot research topic in participating in primary frequency regulation coordination control [3,4,5,6].
