Techno-economic evaluation of electric vehicle charging stations based on hybrid renewable energy in China.

What is EV charging and discharging management model?

Wang et al. established an effective and fast EV charging and discharging management model in the day-ahead stage. It optimizes EV charging and discharging in generalized energy storage (GES). Zheng et al. proposed a hybrid energy storage system (ESS) consisting of EVs and supercapacitors.

How EV charging strategy is applied to smart grids?

It was applied to EVs in smart grids. The strategy can dynamically adjust the charging and discharging time and power of EVs based on factors such as electricity price, grid load, and the charging demand of EVs. It aimed to maximize the benefits for EVs and the grid.

What is intelligent charging and discharging strategy?

Tang et al. proposed an intelligent charging and discharging strategy based on decision functions. It was applied to EVs in smart grids. The strategy can dynamically adjust the charging and discharging time and power of EVs based on factors such as electricity price, grid load, and the charging demand of EVs.
