
How to connect an outdoor split base station

How to install a mini split AC system outside?

After mounting the indoor unit of a mini split AC system, it is time to install the outdoor unit. The outdoor unit should be placed on a stable surface, such as a concrete pad or mounting brackets, and positioned close to the indoor unit.

Where should a mini split outdoor unit be installed?

A mini split can be mounted at least a few inches off the ground, so rainwater drains away. A small cement pad can be poured, or the unit can be mounted on bricks. There are also small cement pads that can be bought which are very popular for setting a mini split unit.

Where should a mini split AC unit be mounted?

It is recommended to mount the indoor unit on an exterior wall in the room where you spend the most time. This ensures that the cool or warm air is distributed evenly throughout the space, keeping you comfortable. The next consideration when positioning a mini split AC unit is the mounting height.

Where should a mini split be installed?

Installing a mini split on the ground is the most common location of a unit. The downside is there is no protection from pets or other animals. In cold climates, snow can pile up more easily in a unit, and weeds and other debris will also need to be periodically removed. Pros Cons

The outdoor unit is the one that makes the most noise, but it also does the most work. Therefore, it is important to install the outdoor unit correctly. Installing an outdoor unit ...
