## Pull out the energy storage power supply

How do you store electricity in an uninterruptible power supply?

There are two main options for storing electricity in a uninterruptible power supply: batteries or a fly wheel. The battery system is fairly common for smaller loads and is comprised of one or a number of rechargeable batteries. A battery UPS requires routine maintenance and replacement since the lifespan of a battery is fairly short.

Why do we need energy storage systems?

As a consequence, the electrical grid sees much higher power variability than in the past, challenging its frequency and voltage regulation. Energy storage systems will be fundamental for ensuring the energy supply and the voltage power quality to customers.
