
Super backup capacitor

Can supercapacitors be used in a backup solution?

Supercapacitors may be used in short-term backup solutions where they act as a source of alternate power, as well as long-term backup solutions where they act as a source of primary power. There are several unique challenges when we attempt to use supercapacitors in a backup solution.

Are supercapacitors a backup power solution for the abracon ab08x5?

Supercapacitors can be charged quickly during normal operation and provide reliable backup power to retain the RTC data when primary power is lost. This document explores the use of supercapacitors as a backup power solution for the Abracon AB08X5 Real-Time clock family.

Which power management solution is best for a supercapacitor backup system?

For optimal performance, a reliable, adaptable power management solution is vital. The LS0502SCD33 (dual channel solution) and the LS0502SCD33S (single channel solution) offer fully integrated power management solutions tailored for systems with supercapacitor backup power applications.

Are supercapacitors a good backup power source for RTCs?

Traditionally, backup power for RTCs has been provided by small batteries or in some cases standard ceramic or polarized capacitors. However, supercapacitors (or ultracapacitors) are often considered an effective alternative due to their long cycle life, rapid charging, and ability to deliver sustained power over extended periods.
