Can solar panels and batteries keep your home running during a power outage?

By creating your own little "island" of a home with solar panels and batteries, you can run essential appliances for days during a power outage. Read on to learn more about how to keep your home running during a power outage.

What happens to solar power during a blackout?

In a blackout situation, the power from your solar panels goes nowhere- unless you have some way of storing the electricity (with a battery) or otherwise cutting your system off from the grid. In this video Will White explains what it takes to ensure you have power with solar during an outage:

Can a generator outlast a power outage?

With your generator and some fuel, you can usually outlast any prolonged outage of the grid, and even help a neighbor out if you need to. Your solar panels will remain off until the grid comes back up, but at least you'll have power. Gas generators tend to be loud, smell bad, and create all kinds of pollution from their use.

Can a solar inverter keep your power on in a blackout?

To keep your power on in a blackout, you need a solar inverter that can remove your home from the grid, along with a generator or battery for longer-term energy needs. By creating your own little "island" of a home with solar panels and batteries, you can run essential appliances for days during a power outage.
